

What is a lithium ion battery?

It is a primary (non-rechargeable) chemistry that is sometimes referred to as lithium metal; do not confuse these with rechargeable lithium-ion batteries. It has a nominal voltage of 1.5V and an open-circuit voltage of 1.8V when new, making it a suitable replacement for alkaline batteries in many applications.

Can I charge my AA 1.5V lithium battery in a normal Charger?

Please note that this AA 1.5V lithium battery cannot be charged in normal battery chargers and needs a specific charger. We supply the Xtar BC4 and Xtar BC8 chargers, which you can add onto this product by choosing the options above.

How much voltage does a lithium ion battery need?

But we all know the range of lithium technology cell voltage is expected to be 3 V for single use cells, up to a max of around 4.2 for li-Ion variations of rechargeable at max charge. All my attempts to research what the truth is (short of buying and cutting one open) have resulted in little more than manufacturers hype.

How many volts is a NiMH battery?

With a voltage rating of 1.5 volts, it is compatible with a wide range of devices. Unlike older NiMH batteries, this battery actually provides the full 1.5V instead of 1.2V. This battery offers a capacity of 1200mWh equating to 900mAh, which allows for extended usage time before needing to be recharged.

What chemistry is used in lithium batteries?

The wiki page for Lithium batteries has a list of many different chemistries and their voltages. A Lithium anode with an Iron Disulphide cathode ($\text{Li} - \text{FeS}_2$) is one such example of a 1.5V terminal voltage, and is the chemistry used in the AA replacement batteries as per the datasheet link on the Wiki page, and in @pjc50's answer.

What chemistries do lithium batteries come in?

Lithium batteries come in many different chemistries, and it is the chemistry that governs the voltage. The most common chemistries are on the order of 3-4V, but there are chemistries which have a 1.5V terminal voltage. The wiki page for Lithium batteries has a list of many different chemistries and their voltages.
