

What are energy storage systems?

Energy Storage Systems are leading the way in balancing demand for electricity and providing flexibility to the supply of electricity in terms of where it can be stored on the network, and the times when it can be utilised. They are a crucial component of the delivery of net zero targets. What sets Innova's ESS solutions apart?

What is long duration electricity storage (LDES)?

Long Duration Electricity Storage (LDES) technologies contribute to decarbonising and making our energy system more resilient by storing electricity and releasing it when needed. LDES can also help reduce costs for consumers through reducing their bills and by avoiding the need for expensive electricity grid upgrades.

What is the 'cap and floor' regime for long duration electricity storage (LDES)?

Ofgem is the regulator for Long Duration Electricity Storage and oversees implementation of a 'cap and floor' regime for LDES projects, proposed by the Department for Energy Security and Net Zero (DESNZ). The aim of this regime is to stimulate investment in Long Duration Electricity Storage projects.

What is solar energy storage (ESS)?

ESS is a device that stores the energy generated from solar and/or wind farms. Currently, most ESS is in the form of two- or four-hour battery systems, however new longer duration storage technologies are beginning to merge. As renewable energy generation is intermittent, ESS help to balance this by storing electricity at times of peak demand.

When should I register for the Energy Storage Summit 2025?

Make sure to register before 17 January 2025! For all event information, please visit the Energy Storage Summit 2025 website. 2025 is set to be a pivotal year for the global energy transition, as we reach the halfway point in a significant decade for the planet on its path to net zero.

How do I contact OFGEM about the long duration electricity storage cap?
