

Can I replace a 10V capacitor with a 35V capacitor?

Your 10V capacitors typically don't encounter voltages greater than a few volts. A 35V capacitor can handle that easily. However, you should not replace a capacitor of one type (such as electrolytic) with one of a different type (like tantalum) as there are differences in other factors such as ESR, ripple rejection, and frequency response.

Can a capacitor exceed 110% rated voltage?

in a capacitor cannot exceed 110% of its rated voltage.-- If the number of faulty elements in a unit is so high that there is a danger of provoking a chain reaction of faults, the battery must be disconnected even if the voltage has not exceeded 110%

How many kV does a fuse use?

use 12 kV, in 12 kV use 24 kV, and in 24 kV use 36 kV. It is also important to ensure that the fuse admits the peak connection current and the current curve for about 20-100 ms. Protection relay The protection systems that give the order
