How are energy systems modeled in the UAE?

Almansoori and Betancourt-Torcat modeled the electricity system in the UAE, using a stochastic approach to determine the effects of uncertain natural gas prices. Established energy system models have also been used to study energy policies for Kuwait (using TIMES-VEDA) and the UAE (using MARKAL).

How does Qatar's energy system work?

The Qatari energy system is designed around the production, transformation, and use of hydrocarbons, both oil and gas. The electricity and water sectors are tied to this system due to the presence of large gas-fired power stations that also produce desalinated water. These are generally called 'integrated water and power plants' (IWPPs).

How to increase the share of electricity supply in Qatar?

Qatar's electricity, water, and cooling demands for 2019 are used as input in this study. The CSP with storage can increase the share of electricity supply by RES to 38.2%. Pump hydro and electro-fuels storage are the best alternatives to enhance the storage capacities of RES.

What is the Qatar energy system modeling and analysis tool (Qesmat)?

We developed a tailor-made optimization model, called the Qatar Energy System Modelling and Analysis Tool (QESMAT), to accurately capture the peculiarities of the Qatari energy system. The Arabic word 'kismet', also used in English, means 'fate' or 'destiny'. Our optimization model can be used to plan for Qatar's kismet.

What role does the energy industry play in Qatar's economy?

The energy industry plays a major role in Qatar's economy. According to the International Monetary Fund, Qatar's earnings from its hydrocarbon sector accounted for 81% of the country's total government revenues in 2021, up from 77% in 2020. Hydrocarbon export revenues rose from \$47 billion in 2020 to nearly \$77 billion in 2021.

How does the EnergyPLAN model work in Qatar?

This study uses the EnergyPLAN tool to analyse Qatar's energy system. The model does this by analysing the economic and technical consequences of different resource integration and investments. EnergyPLAN is an input-output model, and its simulation procedures are described in Fig. 4.
