

Does a firefighting lift need a backup power supply?

As well as needing a separate backup power supply, other features include a cause and effect interface between the lift control system and fire detection equipment, an emergency intercom, a management plan to determine operational procedures, a trap door within the lift car and a lift car that meets the minimum size requirement.

Firefighting Lifts

Do you need backup power for an evacuation lift?

For example, hospitals and care homes require a longer evacuation process and so would need backup power for at least 3 hours. The evacuation lift must be provided with communication networks from the plant room to the lift car and the main floor.

How long should a backup power supply operate a lift?

These backup power supplies must operate the lift for either 60 minutes or 3 hours depending on the evacuation plan and whether immediate evacuation of the premises is possible. For example, hospitals and care homes require a longer evacuation process and so would need backup power for at least 3 hours.

How long does a back-up power supply last?

Irrespective of type, the back-up power supply must operate a lift with sufficient capacity to meet the needs of the evacuees for either 60 minutes or 3 hours depending on the evacuation plan and whether immediate evacuation of the premises is possible.

Do lifts need a backup power supply?

Our enquiries for this application have increased significantly over the last couple of years, ever since a change in UK legislation which means that all lifts intended for evacuation use must now have an emergency backup power supply, in order to meet the BS 9999 Annex G (Fire regulations) standard.

How long should a power supply be protected from fire?

For example, hospitals and care homes require a longer evacuation process, so need backup power for at least 3 hours. Cables from this power supply must be separated from those for the primary power feed, and routed through low fire risk areas. The power supply, like the refuge area, should also be protected from fire for 30 minutes.
