Battery damage repair technology principle

Why should you repair a lead-acid battery?

Effective repair of the battery can maximize the utilization of the battery and reduce the waste of resources. At the same time, when using lead-acid batteries, we should master the correct use methods and skills to avoid failure caused by misoperation.

What are the different types of battery repair methods?

Physical repair methods are usually used, including positive and negative pulse repair technology, high-frequency resonance repair and scanning resonance frequency technology. This kind of repair method has the advantages of low cost, easy to operate, and does not change the internal structure of the battery.

What are the objectives of a battery system?

The objectives are to increase the quality, reliability, cycle life, and safety of batteries and decrease the environmental footprint. Another challenge is the coupling sensing and self-healing functions. Table 1.

How to diagnose battery system fault in real-vehicle operation conditions?

In battery system fault diagnosis, finding a suitable extraction method of fault feature parameters is the basis for battery system fault diagnosis in real-vehicle operation conditions. At present, model-based fault diagnosis methods are still the hot spot of research.

How to reduce the degradation of a battery cell?

The degradation of the battery cell can be minimized by using preventive steps, like artificial interphases, coatings, additives, or materials that operate within the thermodynamic stability voltage window. Like in most systems/applications degradation processes/aging cannot be avoided since battery cells operate in different environments.

How can we improve the sustainability of batteries?

The sustainability of the batteries can be improved with the introduction of biomimetic materials, which should be developed together with self-healing functionalities. Finally, the extrinsic self-healing needs triggering acts which are based on continuous monitoring using sensors built in the battery cell.
