

Does a device use a battery as its power source?

If a device uses a battery as its' power source, internally it is comprised of DC circuits. In fact, any thing that has a computer or digital circuit also relies on DC power sources. As the world becomes more automated and advanced, more devices rely on DC power sources to power the computer chips they use.

Does a computer use a battery as a power source?

Cell phones, laptops, cars, and cordless appliances like drills or even wine-bottle openers all use batteries as a source of direct current. If a device uses a battery as its' power source, internally it is comprised of DC circuits. In fact, any thing that has a computer or digital circuit also relies on DC power sources.

What is a battery & how does it work?

A battery is a device that stores electric power in the form of chemical energy. When necessary, the energy is again released as electric power for DC consumers such as lighting and starter motors. A battery consists of several galvanic cells with a voltage of 2 volt each.

Is a battery a DC power source?

Anything that uses a battery is relying on a DC power source. Cell phones, laptops, cars, and cordless appliances like drills or even wine-bottle openers all use batteries as a source of direct current. If a device uses a battery as its' power source, internally it is comprised of DC circuits.

How do batteries store energy?

Batteries are used to store chemical energy. Placing a battery in a circuit allows this chemical energy to generate electricity which can power device like mobile phones, TV remotes and even cars. Generally, batteries only store small amounts of energy. More and more mobile devices like tablets, phones and laptops use rechargeable batteries.

Do batteries make our energy supply greener?

Batteries are a non-renewable form of energy but when rechargeable batteries store energy from renewable energy sources they can help reduce our use of fossil fuels and cut down carbon dioxide and greenhouse gas production. Find out why batteries may have a key role to play in making our energy supply greener. What is a battery?
