

GF Piping Systems supports the battery production and recycling industry's efforts to build the most sustainably managed factories worldwide. Our global teams developed application-oriented plastic piping solutions that are a corrosion-free alternative to traditional metal solutions.

Polyester resins are commonly used to produce large-diameter water and sewage piping. Polyesters have excellent water and chemical resistance and are noted for acid resistance. Polyester resins are cured by organic peroxide catalysts. The type and amount of catalyst will influence gel time, cure time, curing temperature, and the degree of cure.

FLEXSTRONG™ is manufactured in continuous lengths up to 1,100 m (3,609 ft), depending on pipe diameter. The pipe is flexible and is spooled onto reels which are easy and efficient to transport. The reels allow quick and easy installation, reducing installation costs by up to a ...
