Can liquid-cooled battery thermal management systems be used in future lithium-ion batteries?

Based on our comprehensive review, we have outlined the prospective applications of optimized liquid-cooled Battery Thermal Management Systems (BTMS) in future lithium-ion batteries. This encompasses advancements in cooling liquid selection, system design, and integration of novel materials and technologies.

What are liquid cooling-based battery thermal management systems (BTMS)?

Liquid cooling-based battery thermal management systems (BTMS) have emerged as the most promising cooling strategy owing to their superior heat transfer coefficient, including two modes: indirect-contact and direct-contact. Direct-contact liquid BTMS, also referred to as immersion cooling systems, have garnered significant attention.

Are lithium-ion batteries temperature sensitive?

However, lithium-ion batteries are temperature-sensitive, and a battery thermal management system (BTMS) is an essential component of commercial lithium-ion battery energy storage systems. Liquid cooling, due to its high thermal conductivity, is widely used in battery thermal management systems.

Are liquid cooling systems effective for heat dissipation in lithium-ion batteries?

To address this issue, liquid cooling systems have emerged as effective solutions for heat dissipation in lithium-ion batteries. In this study, a dedicated liquid cooling system was designed and developed for a specific set of 2200 mAh, 3.7V lithium-ion batteries.

What is direct liquid-cooling technology for battery thermal management?

Recently, the direct liquid-cooling technology for battery thermal management has received significant attention. The heat generated from the battery is absorbed directly by sensible (single-phase) cooling or latent heat (two-phase) cooling of the liquid with no thermal contact resistance.

Can liquid cooling improve battery thermal management?

They found that the thermal management achieved through single-phase liquid cooling method can effectively and safely maintain desired temperatures within battery cells and modules. G. Satyanarayana et al. studied the immersion cooling performance of lithium-ion batteries using mineral oil and therminol oil.
