

Can high-altitude energy storage charging piles be fully charged

Can battery energy storage technology be applied to EV charging piles?

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, and storage; Multisim software is used to build an EV charging model in order to simulate the charge control guidance module.

How to reduce charging cost for users and charging piles?

Based Eq. ,to reduce the charging cost for users and charging piles,an effective charging and discharging load scheduling strategyis implemented by setting the charging and discharging power range for energy storage charging piles during different time periods based on peak and off-peak electricity prices in a certain region.

How effective is the energy storage charging pile?

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods,with benefits ranging from 699.94 to 2284.23 yuan(see Table 6),which verifies the effectiveness of the method described in this paper.

How does a charging pile reduce peak-to-Valley ratio?

The proposed method reduces the peak-to-valley ratio of typical loads by 52.8 % compared to the original algorithm, effectively allocates charging piles to store electric power resources during off-peak periods, reduces user charging costs by 16.83 %-26.3 %, and increases Charging pile revenue.

How does the energy storage charging pile interact with the battery management system?

On the one hand,the energy storage charging pile interacts with the battery management system through the CAN busto manage the whole process of charging.

How to plan the capacity of charging piles?

The capacity planning of charging piles is restricted by many factors. It not only needs to consider the construction investment cost, but also takes into account the charging demand, vehicle flow, charging price and the impact on the safe operation of the power grid (Bai & Feng, 2022; Campaa et al., 2021).
