

Can the battery pack be charged and used at the same time

Can You charge a battery and use it simultaneously?

So if you're using your device and charging it simultaneously, keep an eye on the temperature and stop using it or Charging if it starts to get too hot. Yes, you can charge a battery and use it simultaneously. However, you need to be careful about how much power you are using while the battery is charging.

Can You charge and discharge a battery at the same time?

I thought that you could charge and discharge a battery at the same time without issue, but after googling I find that half of the articles say that you can't do that (or you can, but the battery life is shortened or the battery will burn). I also came across the term pass-through charging. So what is the answer to this?

Can I Charge my iPhone and MagSafe battery pack at the same time?

If both your iPhone and MagSafe Battery Pack need to be charged, you can charge them at the same time. Plug the MagSafe Battery Pack into a power adapter and then attach your MagSafe Battery Pack to your iPhone. Using a 20W or higher power adapter, the MagSafe Battery Pack can charge your iPhone with up to 15W of charging power.

Does a battery care about being charged and used at the same time?

A battery doesn't really know and care about being charged and used at the same time. What it "cares" about is the voltage across its terminals. When the voltage applied to it is higher than its own, it will be accepting charge. When its own voltage is higher, it will be losing charge.

Is it bad to use a battery while charging?

It is not bad to use your battery while it is charging. It can be beneficial! By using your battery while it is charging, you can help "top off" the charge and keep the battery in good health. Batteries have a finite number of charge cycles before they need to be replaced. Every time you discharge and recharge your battery, it counts as one cycle.

How does a phone charge its battery?

A phone does not charge its battery then use its battery to power itself. It does far more complicated functions, such as power itself and any excess unused it hands to its battery. It monitors temperature and throttles recharge or its own function to keep inside a reasonable temperature.
