

What does a car battery warning light mean?

The car battery warning light illuminates on the dashboard when the ECU detects a problem with the battery unit or its charging system. It may indicate a low voltage, resulting from a damaged, corroded or worn battery, or a damaged alternator, for example. Keep reading for more information on what different battery indicator lights mean.

Why is my car battery warning light blinking?

Reasons your car battery warning... If the red battery light on your car's dashboard starts blinking, then take it as a sign that your battery or charging system is not functioning properly. The battery warning light is in the shape of a battery symbol, usually with a plus and minus sign.

What does a battery charge warning light look like?

The battery charge warning light resembles a large battery with two terminals, one marked with the 'positive' symbol (+) - and the other with the 'negative' (-). What causes the battery charge warning light to come on? Acid corrosion on the battery terminals. Electrolyte leakage. Loose or corroded battery cables. Faulty wiring.

What does it mean if a car battery light comes on?

If you see the orange or red battery light on, it means that you should stop your car as soon as it is safe to do so and check your car's battery. However, if the car battery warning light comes on while you are on the road, do not stop the car right away.

What does a red battery warning light mean?

If the red warning light comes on, it means the battery is no longer being charged due to a fault with the battery charging system. Some vehicles may also be equipped with a yellow battery warning light. This is less serious and if the yellow battery warning light comes on, it means the battery has a low charge.

When does a car battery warning light go out?

Under normal circumstances, the car battery warning light illuminates temporarily on the dashboard as you switch the ignition (or press the engine start button) to 'on' and then it should go out shortly after the engine has started. This is a bulb function check and the battery light goes out once the alternator starts producing sufficient charge.
