China-Europe electric vehicle new energy battery guarantee

Are China's EV battery manufacturers ready for EU regulations?

With the EU's strict new battery regulations set to enter into force on Thursday, China's electric vehicle battery producers, which have expanded exports to the bloc in recent years, face rising challenges. Industry analysts said that Chinese EV battery makers can prepare by 2027 when some requirements specific to the sector take effect.

Are China's electric vehicle battery exports facing a new challenge?

(Xinhua/Liu Yongzhen) With the EU's strict new battery regulations set to enter into force on Thursday, China's electric vehicle battery producers, which have expanded exports to the bloc in recent years, face rising challenges.

Will China impose countervailing duties on battery electric vehicles?

In this context, the Commission has pre-disclosed the level of provisional countervailing duties it would impose on imports of battery electric vehicles ('BEVs') from China.

Can China offer electric cars in the EU?

We are close to an agreement: China can commit to offering electric vehicles in the EU at least at the minimum price, Lange told German broadcaster N-TV. "This would solve the problem of distorting competition through unfair subsidies, which is why duties were initially introduced," he added.

Are European Union & China close to removing tariffs on EV imports?

The European Union and China are close to reaching an agreement eliminate tariffs on Chinese electric vehicle (EV) imports to Europe, Bernd Lange, chair of the European Parliament's Committee on International Trade, said on Friday.

Are Chinese electric vehicles being subsidized by the European Commission?

Last month, the European Commission confirmed tariffs of up to 35 per cent on Chinese electric vehicles, on top of an existing 10 per cent levy. It has also introduced stricter requirements for companies applying for hydrogen subsidies, decreeing that only 25 per cent of parts in the electrolysers used to make hydrogen can be sourced from China.

Nevertheless, the United States remains the smallest market of the three, with around 100 GWh in 2023, compared to 185 GWh in Europe and 415 GWh in China. In the rest of the world, battery demand growth jumped to more than 70% in 2023 compared to 2022, as a result of increasing EV sales. In China, PHEVs accounted for about one-third of total ...
