

Can a condensed matter battery achieve mass production?

Chinese battery industry heavyweight CATL has unveiled a novel condensed matter battery technology with an energy density of up to 500 Wh/kg. The company said it can achieve mass production within this year. On April 19, CATL unveiled its condensed battery technology at Auto Shanghai.

What is a condensed matter battery?

The condensed matter battery is said to integrate "a range of innovative technologies, including the ultra-high energy density cathode materials, innovative anode materials, separators, and manufacturing processes, offering excellent charge and discharge performance as well as good safety performance," CATL said.

Will CATL batteries be mass produced?

CATL batteries are displayed during an expo in Xiamen, Fujian province. [Photo provided to China Daily] Contemporary Amperex Technology Co Ltd, the world's largest battery maker for electric vehicles, unveiled on Wednesday its cutting-edge condensed battery and claimed that it will soon be mass produced.

Is CATL launching a condensed battery?

The battery giant will also launch the automotive-grade version of condensed batteries, which are expected to be put into mass production this year. Last year, CATL unveiled Qilin battery with the highest integration efficiency in the world, and it has started mass production this March.

When did CATL unveil its condensed battery technology?

On April 19, CATL unveiled its condensed battery technology at Auto Shanghai. Chinese battery giant CATL on Wednesday unveiled a new ultra-high energy battery technology initially slated for aviation, and with an automotive cell under development.

Who owns solid power batteries?

Top management includes CEO and founder Doug Campbell and Technical Director Joshua Beuttner Garrett. The company has grown largely with investment from Ford and BMW, which will purchase solid-state batteries for test vehicles from Solid Power in 2022.

From pv magazine Global. Chinese battery giant CATL on Wednesday unveiled a new ultra-high energy battery technology initially slated for aviation, and with an automotive cell under development. The so-called ...

The Chinese battery giant considers it suitable for electric aircraft but also envisions use in road vehicles, with series production to start this year. Officially referred to as "Condensed Matter" battery, the new cells exhibit ...

CATL says it's a condensed matter battery, which is a type of semi-solid state battery with condensed electrolyte, a new type of anode and the separator materials are different too. The battery boasts 500Wh/kg density, which is quite impressive given that the current EV batteries don't exceed 300Wh/kg.

The key to this advancement lies in CATL's cutting-edge condensed-state battery technology, boasting an energy density of 500Wh/kg. This energy density is double that of current electric vehicle (EV) power ...

specifically, on April 3, Ningde times said on the interactive platform that the company's condensed matter battery energy density can reach up to 500Wh/kg, and is carrying out the cooperative development of civil electric manned aircraft project, implementing aviation-level standards and tests to meet aviation-level safety and quality requirements, and will also ...

condensed matter battery is a just the weird name they give for semi solid state battery. Reply reply fastheadcrab o Yeah, the hype branding from some of these Chinese companies is insane. It's always a race for the highest specs and the hottest buzzwords. As for the battery itself, time will tell as to whether they are truly are a notable ...

At the Shanghai auto show, CATL, the world's largest manufacturer of lithium-ion batteries for electric vehicles, announced it expects to begin production of "condensed ...
