#### Are lithium batteries the future of electric cars?

As electric vehicles are projected to account for over 60% of new car sales by 2030, the demand for high-performance batteries will persist, with lithium playing a key role in this transition, even with the development of alternatives to lithium-ion batteries, such as sodium and ammonium-based technologies.

#### Can lithium-metal batteries replace lithium-ion batteries in electric vehicles?

Despite extensive research, lithium-metal batteries have not yet replaced lithium-ion batteries in electric vehicles. The authors explore critical industry needs for advancing lithium-metal battery designs for electric vehicles and conclude with cell design recommendations.

### Will lithium-ion batteries be used in EVs in 2023?

Additionally,by 2023,the demand for lithium-ion batteries used in EVs,energy storage systems,electric bikes,tools,and other portable devices could reach 4500 gigawatt-hours(GWh). This emphasizes the central role that lithium-ion batteries play in meeting the rising energy needs across multiple sectors.

### Are commercial LMBS a viable alternative to lithium-ion batteries in EVs?

Despite this extensive effort, commercial LMBs have yet to displace, or offer a ready alternative to, lithium-ion batteries in electric vehicles (EVs). Here we explore some of the most critical industry needs that will have to be resolved to advance practical LMB designs for implementation in EVs.

Are lithium-metal batteries a viable alternative to lithium-ion batteries?

Nature Energy 9,1199-1205 (2024) Cite this article Lithium-metal battery (LMB) research and development has been ongoing for six decades across academia, industry and national laboratories. Despite this extensive effort, commercial LMBs have yet to displace, or offer a ready alternative to, lithium-ion batteries in electric vehicles (EVs).

## Are lithium batteries the future of EVs?

LiBs will continue to be widely used in the coming years due to their unique energy density and efficiency, making them central to the evolution of EVs. As EVs become a more viable alternative to conventional vehicles, the demand for high-performance batteries will persist, with lithium playing a key role in driving this transition.

Abstract: This paper proposes a modular transformer coupled multi-active half bridge (TxMAHB) charge balancing architecture for series connected Lithium ion battery (LIB) applications for Electric Vehicles. Unlike the traditional charge balancing circuits, the proposed modular TxMAHB architecture deals with the ac parameters across the transformer, and has the inherent soft ...
