Energy storage charging pile combustion guarantee policy

Should a public charger be on-street?

Providing the equivalent availability of low power, public chargers on-street require a much higher number of small connections to the low voltage network, but the slow, long duration charging is more suited to providing energy flexibility which is likely to factor into the business model.

Should EV charging be integrated with the electricity network?

The integration of EV charging with the electricity network is optimised for a sustainable, efficient energy system and EV driver convenience. Government, Ofgem and industry will build the evidence base to understand the relative costs and benefits of smart public and rapid public charging.

How does charging power affect energy storage demand?

In the CN scenario, the energy storage demand in V1G and V2G modes decreaseby 12.4 % and 22.2 % respectively. Subsequently, the increase of charging power leads to a further decrease on the energy storage demand, with a 45 % decrease in the 75 % FC scenario.

What is smart charging information provision?

Smart charging information provision could be part of a 'charging confidence' theme, to cover the benefits and address consumer concerns for home, workplace, or public charging. This also addresses the fact that the phrase 'smart charging' is not widely understood by EV drivers.

How will government support EV Energy Consumer Service Code of best practice?

Government will support industry to implement voluntary EV energy consumer service code of best practice in 2024 and monitor its uptake. Government will monitor and evaluate the impact of the Electric Vehicles (Smart Charge Points) Regulations. Interim impact evaluation findings are expected by 2025, and the final impact evaluation by 2027

How can EV charging information be used to build confidence?

The simplest way of building knowledge, skills and confidence is through information provision. Whilst there is a growing body of EV charging information and advice available for consumers, feedback suggests that there are still some gaps.
