DOI: 10.1016/j.gloei.2020.10.009 Corpus ID: 229072758; Benefit allocation model of distributed photovoltaic power generation vehicle shed and energy storage charging pile based on integrated weighting-Shapley method

TL;DR: In this paper, a mobile energy storage charging pile and a control method consisting of the steps that when the mobile ESS charging pile charges a vehicle through an energy storage ...

Charging pile; Portable Energy storage; UPS; Charging pile Charging piles are devices that provide electric energy for electric vehicles. They are usually installed in parking lots, public places, enterprises and institutions to facilitate the charging of electric vehicles. They play an important role in promoting the development of electric ...

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management. In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated ...

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 699.94 to 2284.23 yuan ... An IoT- based decision support tool for improving the performance of smart grids connected with distributed energy sources and electric vehicles.

The invention relates to the technical field of new energy charging, in particular to a new energy charging pile with a cable pulling self-separation structure, which comprises a charging pile main body, wherein a charging mechanism is arranged in the charging pile main body, the charging mechanism comprises a main line connecting terminal, the main line connecting terminal is ...

The energy storage rate q sto per unit pile length is calculated using the equation below: (3) q sto = m ? c w T i n pile-T o u t pile / L where m ? is the mass flowrate of the circulating water; c w is the specific heat capacity of water; L is the length of energy pile; T in pile and T out pile are the inlet and outlet temperature of the circulating water flowing through the ...

The proposed method reduces the peak-to-valley ratio of typical loads by 52.8 % compared to the original

algorithm, effectively allocates charging piles to store electric power resources during off-peak periods, reduces user charging costs by 16.83 %-26.3 %, and ...

In this calculation, the energy storage system should have a capacity between 500 kWh to 2.5 MWh and a peak power capability up to 2 MW. Having defined the critical components of the charging station--the sources, the loads, the ...

large amount of electricity in a short time, which makes it an ideal tool for providing ancillary services. The famous German virtual power plant operator Next Kraftwerk [1] ... 3 Development of Charging Pile Energy Storage System 3.1 Movable Energy Storage Charging System At present, fixed charging pile facilities are widely used in China ...
