

How to plan the capacity of charging piles?

The capacity planning of charging piles is restricted by many factors. It not only needs to consider the construction investment cost, but also takes into account the charging demand, vehicle flow, charging price and the impact on the safe operation of the power grid (Bai & Feng, 2022; Campaa et al., 2021).

Can fast charging piles improve the energy consumption of EVs?

According to the taxi trajectory and the photovoltaic output characteristics in the power grid, Reference Shan et al. (2019) realized the matching of charging load and photovoltaic power output by planning fast charging piles, which promoted the consumption of new energy while satisfying the charging demand of EVs.

What is the photovoltaic-energy storage charging station (PV-es CS)?

The Photovoltaic-energy storage Charging Station (PV-ES CS) combines the construction of photovoltaic (PV) power generation, battery energy storage system (BESS) and charging stations.

Can photovoltaic-energy storage-integrated charging stations improve green and low-carbon energy supply?

The results provide a reference for policymakers and charging facility operators. In this study, an evaluation framework for retrofitting traditional electric vehicle charging stations (EVCSs) into photovoltaic-energy storage-integrated charging stations (PV-ES-I CSs) to improve green and low-carbon energy supply systems is proposed.

What are the advantages of PV-Bess charging station?

This new type of charging station further improves the utilization ratio of the new energy system, such as PV, and restrains the randomness and uncertainty of renewable energy generation. Moreover, the PV-BESS can reduce the EV's demand for grid power and the load impact on the grid when the EV is charging.

What is the cost-benefit method for PV charging stations?

Based on the cost-benefit method (Han et al., 2018), used net present value (NPV) to evaluate the cost and benefit of the PV charging station with the second-use battery energy storage and concluded that using battery energy storage system in PV charging stations will bring higher annual profit margin.

The promotion of electric vehicles (EVs) is an important measure for dealing with climate change and reducing carbon emissions, which are widely agreed goals worldwide. ...

In (Ahmad et al., 2017a), a proposed energy management strategy for EVs within a microgrid setting was presented. Likewise, in (Moghaddam et al., 2018), an intelligent charging strategy employing metaheuristics was introduced. Strategically locating charging stations requires meticulous assessment of aspects such as the convenience of EV drivers ...

During the evening peak in charging demand, when photovoltaic output has diminished, energy storage systems discharge to supply power to the logistics fleet. Late into the night, energy storage systems briefly charge to raise the energy level back to 50% of its capacity, consistent with the level at the beginning of the operation.

Compared to standalone PV or energy storage charging stations, PV-energy storage-charging stations offer superior economic and environmental value (Sun et al., 2022). By employing hybrid modeling of PV power forecasting and optimal scheduling of charging piles, superior capacity allocation can be achieved, and significantly enhancing the overall ...
