

How heavy is the new energy solid-state battery

What is a solid state battery?

In a solid-state battery, the make-up is simplified. The liquid is replaced by a solid block, which is lighter than its counterpart and can carry more energy within the same capacity. The solid element is also less reactive than the liquid, so it's much less likely to ignite if punctured or heated.

Are solid-state batteries better than current batteries?

Solid-state batteries are safer, lighter and potentially cheaper and offer longer performance and faster charging than current batteries relying on liquid electrolytes. Breakthroughs in consumer electronics have filtered through to electric vehicles, although the dominant battery chemistries for the two categories now differ substantially.

Can solid-state batteries make a significant contribution to energy transformation?

"We believe that our newly developed material for solid-state batteries can make a significant contribution to the energy transformation of society. We will continue the development towards early commercialisation," said TDK's chief executive Noboru Saito.

Are solid-state batteries a new idea?

Solid-state batteries are not a new idea, and researchers at ORNL previously laid the foundations for their creation and use in the 1990s. They have been used in small formats to power pacemakers, RFID tags -- such as loss prevention tags used in stores --, and wearables for many years.

Can a lithium metal anode make solid state batteries?

Their research not only describes a new way to make solid state batteries with a lithium metal anode but also offers new understanding into the interface reaction between lithium and materials at the anode in these type of batteries.

Does talent new energy have a solid-state battery?

Solid-state battery startup Talent New Energy closes new funding, has over 10 GWh of capacity planned. Talent said its solid-state battery cell prototype has an energy density of 720 Wh/kg, which is twice the energy density of Nio supplier WeLion's semi-solid-state battery cell.
