

How to change the battery of new energy vehicles

Can a car battery be changed?

Changing a car battery is a problem many of us will face at some point. Leaving your car's lights on overnight or the car's age could also speed up wear on your battery. This guide will walk you through the process of removing the old battery and replacing it with a brand new one. What is a car battery and how long does it last?

How do I replace my car battery?

Here's how to replace your car battery! The steps vary depending on your vehicle. It's pretty straightforward for older cars, but newer models can be trickier. We've got you covered for both scenarios. Start by choosing a suitable workspace. Park on a flat surface, away from open flames. If your car is on a slope, the electrolyte could spill.

How long does it take to change a car battery?

Changing your car's battery is a relatively easy job that can be completed in less than an hour. The most important thing is to wear goggles and gloves to avoid accidents and make sure you're unplugging the connectors in the correct order.

How to install a new car battery?

When installing a new car battery, it's important to handle it with care. Follow these steps: Place the new battery in the correct position, matching the positive (+) and negative (-) terminals. Attach the cables: Connect the positive cable first, followed by the negative one.

How do I choose a car battery?

Select a battery by checking your car's manual for specifications or consulting with an auto parts store. Ensure the battery size, terminal locations, and type (lead-acid or AGM) match your car's requirements. How often should a car battery be replaced?

When should I replace my car battery?

It is generally best to replace your car battery when it starts showing signs of deterioration to avoid total failure. This can help to avoid inconvenience, call-out and recovery charges. However, it is always worth checking with your local Protyre garage before making any decisions.
