

# How to connect 10 solar panels in a motorhome

How do I connect multiple solar panels to my motorhome?

When connecting multiple solar panels, connect them in a series or parallel connection. Install the charge controller somewhere in your motorhome that's easily accessible and close to your leisure battery (ideally within 1 metre) to keep cabling as short as possible.

How do I equip my motorhome with solar power?

When it comes to equipping your motorhome with solar power, you have two main options: portable solar panels and flexible solar panels. Portable solar panels are designed to be easily transported and set up wherever you need them. They are typically foldable and lightweight, making them a convenient choice for those who frequently move around.

Can a solar panel fit a motorhome?

Fitting a solar panel to a motorhome is very straightforward. It's a great way to enhance your holiday experience. Solar panels are a reliable source of free energy and will reduce your dependence on mains hookups. So how do you start? What items do you need? You will need a solar panel, a charge controller and some cable.

How much solar power do I need for a motorhome?

For a motorhome, we recommend you fit a solar panel of at least 50 watts. This will keep your battery in good condition, especially while you are not using the van. To increase your independence of the mains hookup you should consider using a solar panel of at least 100 watts.

How do solar panels work on a motorhome?

The installation process involves mounting the panels on the roof or other suitable locations, connecting them to an inverter that converts the DC power from rigid solar panels into AC power, and wiring the system to the electrical circuit of your motorhome.

How do I choose a solar roof for my motorhome?

No two motorhome roofs are alike, and you'll need to choose solar panels that can fit around your skylights, roof lights, vents and aerials. Take a look at your roof, using a tape measure to work out which set-up works best.
