

How to connect the battery so that there is current

Should a battery be connected in a series circuit?

First we will consider connecting batteries in series for greater voltage: We know that the current is equal at all points in a series circuit, so whatever amount of current there is in any one of the series-connected batteries must be the same for all the others as well.

What happens if a battery is connected in series?

When batteries are connected in series, the voltages of the individual batteries add up, resulting in a higher overall voltage. For example, if two 6-volt batteries are connected in series, the total voltage would be 12 volts. Effects of Series Connections on Current In a series connection, the current remains constant throughout the batteries.

How to connect two batteries in series?

Simply, connect both of the batteries in series where you will get 24V and the same ampere hour rating i.e. 200Ah. Keep in mind that battery discharge slowly in series connection as compared to parallel batteries connection. You can do it with any number of batteries i.e. to get 36V, 48V, 72V DC and so on by connecting batteries in series.

What is the difference between voltage and current in a battery?

In series connection of batteries, current is same in each wire or section while voltage is different i.e. voltages are additive. g. $V_1 + V_2 + V_3 + \dots + V_n$ In below figure, two batteries each of 12V, 200Ah are connected in Series. So the total effective Ampere-hour (Ah) would be same while Voltage is additive. i.e. $= 12V + 12V = 24V, 200Ah$

Can a current flow in a battery?

Maybe something like "Current flow in batteries"? Actually a current will flow if you connect a conductor to any voltage, through simple electrostatics.

Why is a battery current the same as a single battery?

The current is the same as for one battery because the same current (I) flows through all the series combination. Since battery capacity (C) in amp-hours relates to the current (I) in amperes, and which is constant in a series circuit, the total amp-hour (Ah) rating of the series combination is the same as for one single battery.
