

How do I repair a solar inverter?

To repair a solar inverter, first, you need to diagnose the problem, which is often indicated by the error code displayed on your inverter's LCD screen. Once the issue is identified, refer to the inverter's manual or consult the manufacturer's technical support.

How do I connect my solar panels to my inverter?

The solar panels are connected to the inverter using four MC4 connectors. These are the black plugs and sockets to the left on the underside of the inverter. Click the video to the right to show this process. Remove the connectors by pinching the prongs and withdrawing the plugs.

Can I replace my inverter myself?

The short answer to this is, if you're a reasonably competent DIYer, then yes, you can replace your inverter yourself. However, if you're unsure of any of the steps or there's something that doesn't tally with this guide, do not proceed and instead give us a call. Please also be sure that it is in fact your inverter that is at fault.

How do I switch off a DC inverter?

Firstly, you need to switch off the inverter using the isolators adjacent to it. Click the video to the right to show this process. Switch off the a.c. isolator first (red handle) then the d.c. isolator (s) (black handle). On some installations the d.c. isolator is built into the inverter (on the underside next to the d.c. connections).

How do you keep a solar inverter from overheating?

If indoors, a well-ventilated, dust-free area is apt. Check and clean your inverter's air intake filter regularly. A congested filter can hamper airflow and lead to overheating. Monitoring technology lets you track your solar system's performance, alerting you of any potential issues.
