

How do I choose a home battery storage system?

Let's start with the battery - the muscle behind your home battery storage system. The size of the battery you install depends on your energy needs. A detached house with five people will likely use more energy than a small 1-bedroom flat with two people. Make sure you do your research before choosing a home battery that's right for you.

How to install a home battery?

If you're installing indoors, make sure your battery is away from direct heat sources. Regardless of whether you install inside or out-, you must ensure you leave adequate clearance around the system for ventilation. And remember that your home battery needs to be installed by an approved installer.

Should you install a home battery?

The whole point of installing a home battery is to cut your bills and your carbon emissions. That makes your ability to monitor your home battery and your overall energy usage all the more important. Most home batteries will come with some form of energy monitoring software - apps, portals and the like. The batteries work without it.

How do I choose a home battery?

Make sure you do your research before choosing a home battery that's right for you. Take GivEnergy's range of home storage batteries as an example. For a small property, the Giv-Bat 2.6 with a capacity of 2.6kWh might be the best choice. For a larger property, the larger All in One with 13.5kWh might be better.

How do home battery storage systems work?

If these are the kind of questions you're asking yourself, this guide, explaining how home battery storage systems work, is for you. All home battery storage systems include two basic components: a battery and an inverter. Let's start with the battery - the muscle behind your home battery storage system.

Can I charge my EV from a plug socket?

Sure, you can charge from an ordinary home plug socket. However, using a dedicated charging point is safer, faster and cheaper. Moreover, with your EV charger integrated with your home battery system, you can manage how you charge your car - with energy from the grid, from renewables, from your battery, etc.
