What is a capacitor made of?

Essentially, a capacitor consists of two conducting plates separated by an insulating medium called a dielectric. dielectric could be air, mica, ceramic, paper, polyester, polystyrene or polycarbonate plastics, etc.. How do capacitor stores charge? In the neutral state, both plates of a capacitor have an equal number of free electrons.

This energy depends on the capacitance of the capacitor. The greater capacitance a capacitor has, the more electric charge it can keep, thus the more energy it can hold. If a capacitor has a capacitance of C , it has been supplied ...
