

What is an intelligent induction lamp?

The "intelligent induction lamp" is a cheap indoor motion sensor night light that comes in handy so you do not have to fumble for the light switch in the dark. It is in fact a compact motion sensor lamp that includes a pyroelectric sensor, Fresnel lens, rechargeable battery, and system controller.

What are the components of an intelligent induction lamp?

When it comes to discrete parts of the intelligent induction lamp, the two main components are a J3Y (S8050) transistor to drive the white LEDs and a CDS photocell to monitor the ambient light level. Below is a quick and dirty closeup of the PCB (HW-0823 / V12.0). I would like to get more detailed in another post.

How do I know when to unplug my induction lamp?

It is a good way to know when to unplug it. Charging time can take a couple of hours though. The intelligent induction lamp will turn its white LEDs on when it detects motion in darkness and turn them off after a specified period of inactivity.

Rechargeable Powered by built-in Lithium battery which can be charged with included USB cable by a phone charger or PC USB port. No electric wire, no need to replace batteries.
