

# Is it good to put a battery cabinet on the roof

Can a battery be installed in a loft?

In March 2024, the British Standards Institute (BSI) published new guidelines in a document entitled PAS 63100:2024. And it has something to say about battery installations in lofts. Section 6.5.5 states that batteries shall not be installed in 'voids, roof spaces, or lofts.' Reasons for this likely revolve around fire safety.

Where should a home battery be installed?

A key question to consider when looking to have a home battery installed is where to put it. Many of our customers assume it will go in the loft since it is often an addition to or installed in conjunction with a solar system, and the solar inverter is usually in the loft (at least in the UK).

What's a good way to store a battery in a loft?

For people that don't have external garage or something, battery in fire rated enclosure (or fire rated battery itself) in the loft, with fire detection (and suppression) is probably the best option. If it does go wrong it will give people plenty of time to escape with good escape routes.

Should you install a home battery storage system?

Installing a home battery storage system is the first step towards making your home more energy independent. Home batteries are overwhelmingly safe, especially with the shift towards LiFePO4 battery chemistry. However, enhanced safety shouldn't detract from the need to follow relevant regulations and guidelines when it comes to installation.

Should you invest in a home battery?

Whether coupled with solar PV panels or as a standalone system, battery storage allows homeowners to cut energy bills and carbon emissions. Before investing in a home battery, you need to decide where in your property to install your system. A loft installation can be tempting, especially for properties with limited space.

Are home battery storage systems safe?

Keep your system away from direct sunlight to avoid risk of overheating. Installing a home battery storage system is the first step towards making your home more energy independent. Home batteries are overwhelmingly safe, especially with the shift towards LiFePO4 battery chemistry.
