

## Is it okay to not use a balance charger for the battery pack

Do I need a balance lead to charge a battery?

The chargers I use (ISDT) don't do any balancing unless the cells are out of balance towards the end of a charge cycle. My chargers only require the balance lead to be plugged in if doing a balance charge. Otherwise it is just looking for a target voltage to shut off at. Balance charging takes 3 to 4 times longer than a fast charge.

Can a battery be charged without a balancer?

In your case you have FIVE cells in series which is virtually impossible to charge without a balancer. So there is nothing to prevent one or more of the cells from over/under charging which will eventually cause a problem with your battery. Do NOT use a lead-acid charger on any Li-based cell!

Do I need balancing when charging a pack?

You are correct. Charging without cell monitoring and charge control is an accident waiting to happen. Just because it worked a few times doesn't mean it's not necessary. Packs do not require balancing every time you charge - but most chargers monitor all cells during charging so that you don't overcharge any cell.

Do I need to balance charge every time I charge?

As long as you usually balance and as long as your charger monitors all cells, then you don't need to balance charge every time you charge. Packs do not require balancing every time you charge - but most chargers monitor all cells during charging so that you don't overcharge any cell.

Does a 2s battery charger have a balancer?

The charger that I have has a balancer output to balance the cell voltage in batteries, but a lot of 2S packs on the market don't include a balance connector at all. For example, this one: Why is that? Isn't it unsafe to charge a 2S (or any multi-cell battery) without proper cell balancing? Why do some &lt;x> come without &lt;y>.

Do batteries need balancing?

Without balancing you are relying on the cells continuing to stay matched. Good cells will do this for many years if treated well. In my experience a battery that needs regular balancing usually has a faulty cell, and will get worse. Once a battery gets to this condition it is best to discard it, even if using a balance charger.

I have read that it is strictly not recommended to charge Li-ion cell packs in series without using a balance charger. My question is, can a balance charger be avoided by ...

My chargers only require the balance lead to be plugged in if doing a balance charge. Otherwise it is just looking for a target voltage to shut off at. They will not charge a ...

## Is it okay to not use a balance charger for the battery pack

You do need a balancing type charger to charge them. DO NOT use any charger designed only for Nih battery packs. Nearly all currently mfg chargers designed for ...

Keeping your Quest 2 battery at 100% is generally a bad idea. Lithium batteries don't like being at either 0% or 100%. Personally, I use a 10000mAh tiny battery pack from Anker, Velcro'd to the ...

Always use a proper LiPo battery balance charger/discharger when charging and discharging your LiPos. ... you need to discharge your battery down to 3.6v-3.8v per cell for safe storage until you are ready to use the ...

In that case, you're going to need to wire in a balance connector so that you can balance charge your battery when necessary. Balance charging requires, wait for it.... a balance charger. (Yea, ...

Multi-Chemistry Chargers: As the name implies, these can charge many different battery chemistries making them versatile. However, their LiPo balance charging is ...

And if I can use my balance charger, I don't want to use the wrong settings and burn my house down. Thanks! Sign up now. to remove ads between posts. Sep 17, 2018, ...

Use a RC Battery charger to fix your unbalanced batteries . Information ... AND - the fact is that most users seldom have battery balance issues. Statistically, most users never will, and of the ones that do, many won't even realize what's going ...

The packs have over-discharge and over-charge protection, however, they do not have integrated balancing (from what I can tell from a read through of a translated copy of the CM1033-DS data ...

I think occasionally it won't be a problem. It's been shown that leaving lith-ion batteries at 100% charge for long periods of time is detrimental to the battery health, but if you are plugging it in ...
