

Could a blade battery reduce the price of electric vehicles?

The Blade Battery 2.0, with its cost reduction strategy, could significantly lower the price of electric vehicles. A 15% decrease in battery cost could translate into a reduction in the vehicle's overall price or could be used to increase the margin for manufacturers, making EVs more competitive against their gasoline counterparts.

What is BYD's next-generation blade battery?

In the rapidly evolving world of electric vehicles (EVs), where cost and efficiency are king, BYD has announced a game-changing development. The Chinese giant, known for its substantial strides in the EV market, is now targeting a 15% reduction in battery costs with its next-generation Blade Battery 2.0.

Does BYD have a second generation blade battery?

BYD's e-platform 3.0 with first generation LFP blade battery in Shenzhen. Credit: CarNewsChina BYD targets a 15% cost reduction for its second-generation blade battery, which will launch in the first half of 2025, a source familiar with the matter told CarNewsChina.

Will BYD launch a new blade battery in 2025?

There are increasing indications that BYD will launch a new generation of its blade battery in 2025. According to an insider, the Chinese manufacturer is aiming for a cost reduction of 15 per cent for the new edition of its in-house LFP battery. The first concrete figures on future energy density are also circulating.

What is a blade battery?

The Blade battery, which was first introduced in 2020, is an in-house development by BYD. The name refers to the unusual format: the cells are very long and therefore resemble a sword blade. The elongated cells are installed in the battery packs at right angles to the direction of travel.

What is a BYD long blade battery?

The new long blade variant represents a notable improvement, bridging the gap with premium NMC (nickel-manganese-cobalt) batteries while retaining the inherent cost advantages of lithium iron phosphate (LFP) chemistry. BYD's strategy hinges on reducing the cost of the higher energy density variant by 15% compared to its predecessor.

6 ???&#0183; BYD's latest edition of the Blade battery is anything but dull. In fact, a report from CarNewsChina said the company is planning to slash pack costs by 15% as the tech 's ...

An EV battery price war is heating up. BYD is launching its next-gen Blade EV battery next year, promising to unlock more range and faster charging at a significantly lower cost.

The new Blade batteries will feature higher energy density and faster charging rates. If this development

comes to manufacture... Cao explained that the new unit promises to "enhance the driving distance of our vehicles." ... battery prices are still dropping and expect another big drop as solid state batteries mature. <https://> ...

BEIJING, Nov 25 (Reuters) - China's electric vehicle giant BYD, opens new tab said it will launch a new generation of blade batteries in 2025, Chinese state media CGTN reported on Saturday.
