

What voltage is a LiFePO4 battery?

Explore the LiFePO4 voltage chart to understand the state of charge for 1 cell, 12V, 24V, and 48V batteries, as well as 3.2V LiFePO4 cells.

What is a good state of charge for a LiFePO4 battery?

It is also a good state of charge for the battery to sit at. This is because they have a low self-discharge rate (less than 3% per month). So when you receive a 12v lifepo4 battery, it will be around 13 volts. You need to know that the discharge rate affects the voltage. If we discharge a battery at 1C, the voltage will be lower than at 0.2C.

How to check LiFePO4 battery status?

Some LiFePO4 batteries, like PowMr 51.2v battery, often come equipped with built-in monitor and indicator that display both voltage and State of Charge (SoC). This feature allows you to quickly and easily check the battery's status without additional tools.

What is the specification of rechargeable LiFePO4 battery pack?

This specification defines the performance of rechargeable LiFePO4 battery pack, describes the type, performance, technical characteristics, warning and caution of the battery pack. Basic Specification

NO	Items
1	Rated Voltage 51.2V
2	Rated Capacity 100Ah 200Ah
3	Rated Energy 5.12kWh 10.24kWh

What does SoC mean on a LiFePO4 battery?

In essence, $\text{SoC} = 100\% - \text{DoD}$. For example, if a battery has a recommended DoD of 80% for a lifespan of 6000 cycles, it means you should charge the battery when its SoC drops to 20% or lower. A voltage chart is commonly used to monitor the State of Charge (SOC) of a LiFePO4 battery.

What is a 12 volt LiFePo 4 battery?

Higher discharge rates needed for acceleration, lower weight and longer life makes this battery type ideal for forklifts, bicycles and electric cars. Twelve-volt LiFePO 4 batteries are also gaining popularity as a second (house) battery for a caravan, motor-home or boat.
