

Can battery energy storage reduce microgrid operating costs?

By adding battery energy storage (BES) to a microgrid and proper battery charge and discharge management, the microgrid operating costs can be significantly reduced. But energy storage costs are added to the microgrid costs, and energy storage size must be determined in a way that minimizes the total operating costs and energy storage costs.

Are lithium ion batteries a good choice for a microgrid?

Lithium-ion (Li-ion) batteries are the most highly developed option in size, performance, and cost. A broad ecosystem of manufacturers, system integrators, and complete system providers supports Li-ion technology. However, the vendors best equipped to bring value to microgrids bring the right components to each project.

Why do remote microgrids need a battery energy storage system?

In remote microgrids, the integration of renewable energy sources (RES) is essential to meet the demand in conjunction with the dispatchable fuel-based generation units. The need to facilitate RES efficiently and the very high cost of fuel transportation in these areas make installing battery energy storage system (BESS) an appealing solution.

Can a microgrid be used for energy storage?

The Inflation Reduction Act incentivizes large-scale battery storage projects. And California regulations now require energy storage for newly constructed commercial buildings. The same microgrid-based BESS can serve either or both of these use cases.

How does energy storage size affect microgrid costs?

As shown in Fig. 1, increasing energy storage size reduces operating costs. But the cost of energy storage increases. The total microgrid costs are minimized for optimal battery size, Fig. 1. Optimal BES sizing.

How to determine the optimal energy storage size in a microgrid?

The use of battery is not limited to microgrid and the economic approach is not the only approach for determining the optimal energy storage size. In , , energy storage size is determined based on frequency maintenance in a microgrid disconnected from the grid, and economic issues are not considered in these studies.
