

Can old coal mines be converted into gravity batteries?

Old coal mines can be converted into "gravity batteries" by retrofitting them with equipment that raises and lowers giant piles of sand. Underground Gravity Energy Storage system: A schematic of different system sections. (Credit: JD Hunt et al.,Energies,2023)

How are power systems transforming the mining industry?

Power systems in mining and other industries are seeing a major structural transformation as renewables and energy storage costs continue to decline. Innovations in battery storage, such as advanced, grid-forming inverters, are allowing the mining industry to move away from diesel- and gas-powered generators.

How much would a deeper mine cost compared to a lithium-ion battery?

A deeper mine would not only produce and store more energy, but would also be more cost effective. Energy storage costs vary from \$1 to \$10 per kilowatt-hour for UGES, the authors calculate, downright cheap compared to lithium-ion batteries, which currently cost about \$150/kWh. Battery prices continue to fall as chemistries improve, however.

Can a mine run a solar power plant?

Some mine operators are already using their own land adjacent to mines to generate solar energy, which is then used to power mine operations. These mine-owned projects can then be scaled up and tied to the grid to sell excess power back to local communities.

Could underground gravity energy storage repurpose old mines?

An international team of scientists recently proposed another innovative and resourceful solution that involves repurposing old mines: Underground Gravity Energy Storage (UGES). They outlined the idea in the journal *Energies*. UGES involves lowering large amounts of sand stored in containers attached to a central cable down a deep underground shaft.

Does Hitachi energy have inverter technology?

While advanced inverter technology has recently gained significant interest, Hitachi Energy has been delivering this technology for more than a decade, including at many mine sites. Take Sandfire Resources' DeGrussa mine in Western Australia.

4 ???· The implementation of battery electric vehicles (BEVs) in underground mining is relatively recent. BEVs offer several advantages over diesel machines, including enhanced ...

With the rapid development of modern coal mine, the use of high power motor brings up a lot of reactive power. This kind of situation is very outstanding in the mining coal face. It becomes obvious especially on-peak demand. Therefore, the dynamic reactive power compensation technology research is of important

significance in coal mine underground.

It is suitable for variable frequency asynchronous motor or ordinary asynchronous motor of AC 50Hz, motor power 11KW~1120KW, rated voltage 660V or 1140V to soft start, soft stop and operation process control under heavy load, its start, ...
