

How to install a utility pole?

To install a utility pole, first consider the height. You'll need to dig a hole using a post hole digger or rented power auger, and a shovel. Hammer two by six boards securely into the ground on one side of the pole to line it for installation.

How do you build a pole-mount solar system?

To build a pole-mount solar system, you'll dig a single deep hole in the ground. It'll hold a large pole, upon which you'll connect your rails and mount your solar panels. Pole-mount systems offer greater clearance from the ground, which is useful in avoiding foliage or other ground obstructions.

How to install a private power pole?

To install a private power pole, gaining permission is needed from the network and electricity distributors. Where the power pole will be installed needs to be excavated before the installation begins. In places where excavating the ground is not easy, such as in the city, then underground service lines are needed.

How do I install a pole mount?

A wood block placed between the pole and conduit will make installation easier. Strapping the conduit directly to the pole works well in most cases - just remember to leave some space for the pole mount install.

Can a solar array be installed on a freestanding pole?

In some cases, you may need to install the solar array on a freestanding pole to achieve the desired location. Once you, the installer, and the customer have determined the best spot to install the solar array, you can discuss other details such as conduit length and trenching.

How long does it take to install a pole mount?

We recommend positioning the pallets within 10-20 feet of each pole, allowing you to quickly grab what you need. Once the packaging is removed, you can simply start from the top. This way, you can progress relatively quickly through the installation process. A pole mount can be assembled in a half day to full day, depending on experience.
