How does a battery filling process work?

However, the filling process consists not only of an initial filling phase but also of a subsequent long wetting phase. In practice, even after the standard amount of electrolyte has been fully injected into the battery, the electrolyte does not completely wet the entire battery structure.

What is filling a lithium-ion battery with electrolyte liquid?

Filling a lithium-ion battery with electrolyte liquid is a core process in battery manufacturing. Better understanding of this process will reduce costs while enabling high product quality. Nonetheless, the process has not been sufficiently examined by science yet.

What is a process model in electrolyte filling?

Basic parameters for each step will be proposed. This way, the process model assists the user in designing an electrolyte filling process for a random battery. The proposed implementation of the filling process serves as a base for the design of the filling apparatus.

What is electrolyte filling process?

The electrolyte filling process aims to dose the necessary amount of electrolyte into the battery within the shortest possible time. In general, the voids of the cell stack are not completely filled after electrolyte dosing. To allow the liquid to penetrate the porous media completely, the cells are warehoused.

What is the electrolyte wetting process in lithium-ion battery manufacturing?

The electrolyte wetting process in lithium-ion battery manufacturing is a critical part of processes that affects battery performance and productivity. However, it is difficult to accurately measure and optimise this process with existing technologies.

Can a soft pack battery be used to simulate the wetting process?

In order to investigate the complete wetting process of the electrolyte and reduce the simulation time of the model, this section adopts the soft pack battery made of the same pole material as that of the target large-size battery for geometric modelling, and builds a simulation model of the full cycle of battery filling and wetting.
