

Can a new battery material reduce the amount of lithium?

It has been corrected to say that the material can reduce the amount of lithium by as much as 70 percent. We regret the error. Microsoft and the Pacific Northwest National Laboratory used AI and high-performance computing to discover a promising new battery material faster than ever before.

Could a new lithium-ion battery make electric cars more sustainable?

MIT researchers have now designed a battery material that could offer a more sustainable way to power electric cars. The new lithium-ion battery includes a cathode based on organic materials, instead of cobalt or nickel (another metal often used in lithium-ion batteries).

Is AI accelerating the search for new battery materials?

Artificial intelligence (AI) and large-scale cloud computing is speeding up the search for new battery materials. An AI-enhanced collaboration between Microsoft and the Pacific Northwest National Laboratory (PNNL) has already produced one promising new material, which the two are sharing publicly today.

Can a lithium metal anode make solid state batteries?

The research not only describes a new way to make solid state batteries with a lithium metal anode but also offers new understanding into the materials used for these potentially revolutionary batteries. The research is published in Nature Materials.

Could artificial intelligence reduce the reliance on lithium in batteries?

Microsoft in collaboration with the Pacific Northwest National Laboratory (PNNL) has harnessed the power of artificial intelligence (AI) and high-performance computing to discover a novel material that could significantly reduce the reliance on lithium in batteries.

Could MIT battery material be a sustainable way to power electric cars?

Lamborghini has licensed the patent on the technology. Dinc's lab plans to continue developing alternative battery materials and is exploring possible replacement of lithium with sodium or magnesium, which are cheaper and more abundant than lithium. An MIT battery material could offer a more sustainable way to power electric cars.
