

What are Island integrated energy systems?

Island integrated energy systems IIESs leverage energy cascade utilisation and multi-energy coupling, coordinating various energy resources and integrating source-grid-load-storage. This approach can smooth out power load fluctuations, optimise the usage of multiple energy sources, and achieve high energy efficiency.

How do Island energy systems work?

Based on the types and resources of island energy, IIESs are constructed for hierarchical energy utilisation and multi-energy coupling, coordinating resources to achieve source-grid-load-storage integration. The optimisation of IIESs is reviewed, with a focus on modelling methods, intelligent algorithm development, and system simulation.

Should marine energy be integrated into existing energy systems?

Integrating marine energy into existing energy systems can reduce the burden on the power grid, increase the energy supply to islands to meet the needs of their inhabitants, and minimise the transportation and consumption of fossil fuels.

Do Island energy systems need optimisation algorithms?

Optimisation algorithms Notably, the modelling and optimal operation of island energy systems tend to be complex, nonlinear, and uncertain due to the highly complex structures of island energy systems. Gao et al. studied the optimisation of a desalination system with 12 motors, considering water flow and pressure constraints.

Why is integrated development important for Island energy systems?

Island energy facilities vary, and integrated development is crucial for building new energy systems. Based on the types and resources of island energy, IIESs are constructed for hierarchical energy utilisation and multi-energy coupling, coordinating resources to achieve source-grid-load-storage integration.

Are marine energy systems economically viable?

The economic feasibility and environmental sustainability of marine energy systems are comparatively analysed to enhance the development and utilisation of marine energy technology while reducing the economic cost of power generation.
