

How do photocells work?

Photocells placed either side of an entrance portal create a barrier made of light, if the light beam is broken then it can send a signal to the control box and begin reversing the gate or door or stop it all together, before an impact can take place.

Why do I need photocells?

Whilst safety edges protect people and vehicles from the heavy forces of gate leaves and garage doors, photocells are intended as preventative measures.

How much does a photocell cost?

The photocell itself costs \$0.50, but it's usually an integral part of the control switch. You may need to replace the entire switch unless you're familiar with soldering and electronics.

What is the smallest photocell?

The Compacta photocell is one of the smallest photocells on the market measuring just 110mm x 33mm x 33mm and has an adjustable lens offering a full 180° range, providing more flexibility with installations.

What are Beninca Pupilla B battery-powered photocells?

Beninca PUPILLA.B battery-powered photocells with solar panel charger. No need to bother digging up the driveway, with these photocells you only need power on one side - saving you time, money and hassle! More Info... Pair of adjustable relay photocells.
