What are metal halide perovskite solar cells?

Metal halide perovskite solar cells are emerging as next-generation photovoltaics, offering an alternative to silicon-based cells. This Primer gives an overview of how to fabricate the photoactive layer, electrodes and charge transport layers in perovskite solar cells, including assembly into devices and scale-up for future commercial viability.

What is the first report on perovskite solar cells?

J. Am. Chem. Soc. 131,6050-6051 (2009). To our knowledge,this is the first report on perovskite solar cells. Kim,H.-S. et al. Lead iodide perovskite sensitized all-solid-state submicron thin film mesoscopic solar cell with efficiency exceeding 9%. Sci. Rep. 2,591 (2012).

What is a perovskite active layer?

Understanding the perovskite active layer is crucial, as its exceptional light absorption and charge transport properties are key to solar cell performance. The perovskite photoactive thin film has the chemical composition ABX?, in which A is an organic or inorganic cation, B is a metal cation and X is a halide anion (Fig. 1a).

Could perovskites push solar cell efficiencies beyond current limits?

Tandem structures combining perovskites with other materials could push solar cell efficiencies beyond current limits. As production scales up,PSCs are expected to be used in diverse markets,from portable electronics to utility-scale solar farms.

What are perovskite-based solar cells?

Perovskite-based solar cells (PSCs) have emerged as the leading next-generation photovoltaics, with formidable power conversion efficiency (PCE), solution processability and mechanical flexibility, surpassing conventional silicon-based counterparts. These properties align with the requirements for cutting-edge photovoltaic systems.

How does light affect the stability of a perovskite structure?

3.7. Light-induced self-assembly Light can distort the [PbX 6]4- octahedra in the perovskite structure, resulting in lattice distortion, which has always been considered one of the main factors affecting the stability of the perovskite structure.

A schematic of a perovskite solar cell, showing that the perovskite is nestled in the center of the cell. Absorption of solar light causes the electrons to jump to higher energy levels, leaving the holes behind.

This research includes fabrication of perovskite solar cells using the p-i-n structure (inverted structure) with a

The invention discloses a kind of perovskite solar components and preparation method thereof; including glass substrate layer, transparent conductive film layer, the first contact layer, perovskite light-absorption layer, the second contact layer, metal electrode; a kind of preparation method of perovskite solar components, includes the following steps: step 1: transparent conductive film ...

Perovskite is named after the Russian mineralogist L.A. Perovski. The molecular formula of the perovskite structure material is ABX 3, which is generally a cubic or an octahedral structure, and is shown in Fig. 1 [].As shown in the structure, the larger A ion occupies an octahedral position shared by 12 X ions, while the smaller B ion is stable in an octahedral ...
