

Solar rechargeable batteries (SRBs), as an emerging technology for harnessing solar energy, integrate the advantages of photochemical devices and redox batteries to synergistically couple dual-functional materials capable of both light harvesting and redox activity. This enables direct solar-to-electrochemical energy storage within a single system.

One small 5v solar panel for each. A low power HF radio with antenna LED flashlights A cheap infrared night vision device that I had on hand An old FLIR thermal imager that I had on hand Small solar charger capable of charging the above devices, 18650 cells, and rechargeable AA/AAA. Cheap rechargeable power banks
