Which capacitor manufacturers are the best?

Diamond-like coatings for improved operating fields In conclusion, capacitor manufacturing has seen significant advancements in recent years, with leading brands like Cornell Dubilier, Panasonic, and Murata at the forefront. These manufacturers offer a wide range of capacitors suitable for various applications.

Where can I buy a capacitor?

Capacitors seem to be one of those things that is counterfeited a lot, so definitely want to buy from good sources like Digikey, Mouser etc. Avoid Ebay, Aliexpress, Amazon etc as you don't know what you're getting. Re: Capacitor brands? Vishay and Kemet are not "premium" grade electrolytic manufacturers.

Should I buy capacitors from China?

Don't ever buy capacitors from China. Especially top brands from the post above. In addition to those there are: Vishay and Kemet are not "premium" grade electrolytic manufacturers. Kemet makes fine poly's and Vishay makes fine ceramic caps. I would not recommend either as first choice for Electrolytics.

What are the different types of capacitors?

Ceramic, thin film, and electrolytic capacitors are prominent choices due to their versatility, cost-effectiveness, and reliability. The key factors that control the capacitance of these capacitors include the size of the electrode plates, the proximity of the plates to each other, and the insulation material between them.

Is Ali express a reliable source of capacitors?

Never buy capacitors from unreliable sources as there is a huge market for fakes. Ali express is not a reliable source of goods. There are many good capacitor brands. Not in particular order.. I personally prefer Rubycon but for reasons of availability do sometimes use Panasonic/nichicon. There are also many other ok brands but I prefer the above.

Are Mallory capacitors good?

FWIW, Mallory made some great aluminum electrolytic capacitors for PSU/UPS types of applications. Fresh units are under the CDE label as Mallory became Cornell Dubilier. Might be helpful if you manage to locate NOS Mallory capacitors. Yeah seen them in some high end PSU/UPS applications. Reliability is rather good far as I understand.

Briefly, dielectric absorption has been revealed as a major source of distortion in audio circuits. Film dielectric type capacitors, particularly polystyrene, have very low dielectric absorption and for this reason are preferred in audio circuits. ... one is at a loss as to what capacitor type, brand, and value to parallel it with. Some feel it best to divide the needed value as evenly as possible, and use equal valued parallel capacitors, whenever possible. Mainly I've read that this will keep from causing phase issues, which can cause an echo type effect to the speaker's sound. Also, it's better to keep values the same, as each capacitor will have the same discharge ...

Explore leading brands in capacitor manufacturing like Cornell Dubilier, Panasonic, and more for reliable and high-performance electronic subsystems.

Higher ripple current handling = less heat = longer capacitor life A capacitors lifetime is measured in hours at given temperature. Higher temperature ratings are always recommended as the capacitor will last longer at hotter temps. Do ...

2) What happens to sound when parallel capacitor performance degrades with time (lets say electrolytic capacitor after 15 years or so). Currently I have old speakers that play voices very thin, like "small voices". Its hard to hear actual words in song. I suspect that this can be caused by degraded parallel
