Identify the positive (+) and negative (-) terminals on the battery. Using a wrench or a socket, loosen the nut on the negative terminal. Carefully remove the negative terminal connector from the battery post. Once the negative terminal is disconnected, repeat the process for the positive terminal.

When removing a car battery should you disconnect the negative terminal?

When removing a car battery, you should always disconnect the negative terminal first. - Reduces the risk of short circuits. - Ensures safety from electric shock. - Simplifies the process of reconnecting the battery later. - Some mechanics advocate removing either terminal first, depending on circumstances.

How to disconnect a car battery?

Always disconnect the car battery in this order: first remove the negative terminal, which has a black cable and a minus (-) sign. Next, remove the positive terminal, marked with a red cable and a plus (+) sign. Following this order prevents electrical shorts and ensures safety during maintenance.

What happens if you disconnect a positive battery terminal first?

Therefore, carefully remove the negative battery terminal first before the positive terminal. If you disconnect the positive terminal first before the negative, the wrench you use in removing the positive cable may touch the car's body (metal surface) or the engine block and trigger a severe spark capable of damaging the battery.
