

Roof requirements for installing solar panels

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

How much weight can a solar roof hold?

Installers must only fit solar panels if they're sure your roof can hold their weight, and carry on doing so for up to 40 years. Fortunately, most roofs in the UK are built to hold much more than a solar panel system, which usually weigh around 20kg per square metre when everything's included.

What are the installation requirements for PV solar panels?

PV Solar Panel Install Requirements: Orientation-your roof should ideally be within 90 degrees of south. The more southerly facing the more electricity your panels will produce. You can see just how a small orientation difference can affect output in this orientation article. Don't rely on 'thinking' you know what way south is.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Do I need a roof to get solar panels?

Before you get solar panels, you'll want to know whether your roof is ready and able to support them. Thankfully, most residential roofs in the UK are strong enough and pitched at a decent enough angle - and most other obstacles can be navigated.

How big should a solar panel roof be?

An ideal roof size for solar panel installation is between 400 and 600 square feet since each solar panel typically requires about 18 square feet. The roof should have a slope of 30-40 degrees with a slanted style, making it the best option for solar panels. However, solar panels can also be installed on flat roofs. An average size for a good solar panel roof is 400-600 square feet.

Before going ahead with a solar panel installation, you must first check that the conditions at the top of your roof meet some necessary requirements. To generate enough electricity ...

Workers fixing solar panels onto mounting brackets on a tile roof. **Roof Pitch:** The pitch, or angle, of your roof is another important consideration. Solar panels work best when they are installed on roofs with a pitch between 15 and 40 degrees.
