

What are solar panel ballast blocks?

Solar Panel Ballast Blocks Available in three standard sizes within days of ordering and a bespoke range to suit your individual project specification,our solar panel ballast blocks provide ground mounted solar panel systems for commercial solar farms. The above ground blocks do not breach the land.

Can a concrete base support solar panels?

An example of free-standing concrete bases being used to support solar panelscan be seen at Wellingborough solar farm. Due to an archaeological restriction on part of the land,our bespoke division manufactured 275 reinforced concrete blocks,this allowed a group of panels to be erected without the need for excavation.

What types of solar ballast footings does Conigliaro block manufacture?

Conigliaro Block manufactures all types of precast concretesolar ballast footings used to securely mount and position solar panels. Our solar ballast blocks are poured to your specifications to prevent movement and overturning of solar panel systems. Our footings are available in a wide range of sizes,weights and mixes.

How many reinforced concrete blocks are needed for solar panels?

Our bespoke division has recently manufactured a set of 275 reinforced concrete blocks to support an array of large solar panels.

How do solar ballast blocks work?

The flexible mould system used for casting the prestressed blocks enables for the solar panel bases to be cast in any size to suit the dimensions of the specified solar modules. Installation of the solar ballast blocks is exceptionally fast, with a range of lifting options to suit site plant.

Can a reinforced concrete block support a solar panel above ground?

In areas where penetration of the ground is difficult or restricted for archaeological or safety reasons,our reinforced concrete blocks are the perfect solution,providing ballast to support these solar panels above ground. Our solar panel ballast blocks are designed to provide support to multiple panels.
