

Where are solar cells made?

US-based ES Foundry has inaugurated a new solar cell manufacturing facility in Greenwood, South Carolina. The factory, covering an area of more than 400,000ft², is expected to hire 500 people by June 2025.

Where are our advanced solar cells made?

"Our advanced solar cells are engineered and manufactured right here in the United States, ensuring reliability, efficiency and the opportunity to maximise financial incentives for our partners.

Is the US solar supply chain onshoring?

The pursuit of onshoring the US solar manufacturing supply chain has come with the challenge of imbalanced capacities of domestically made modules, cells, wafers and ingots. But according to the "US Solar Market Insight Q4 2024" report by the Solar Energy Industries Association (SEIA) and Wood Mackenzie, the tide may be turning.

Are ES Foundry solar cells eligible for a domestic content bonus?

ES Foundry is currently making crystalline bifacial passivated emitter and rear contact (PERC) solar cells that it says qualify for the domestic content bonus. The initial annual capacity is 1 GW, ramping up to 3 GW by the third quarter of 2025.

How many solar modules can the US produce in 2022?

Since passage of the US Inflation Reduction Act in 2022, domestic solar module manufacturing has nearly quintupled, according to the SEIA. In 2022, the United States was producing less than 7 GW, which has grown to over 40 GW today. At current full capacity, the nation can produce enough solar modules to meet nearly all US demand, the report said.

Can the US produce enough solar modules?

At current full capacity, the nation can produce enough solar modules to meet nearly all US demand, the report said. Demand is expected to be 40.5 GW (DC) in 2024, followed by average annual volumes of at least 43 GW (DC) from 2025 to 2029. Cell manufacturing, however, has been slower to take hold due to the complex and costly process.
