

How have lithium-ion battery prices changed over the last 10 years?

Lithium prices, for example, have plummeted nearly 90% since the late 2022 peak, leading to mine closures and impacting the price of lithium-ion batteries used in EVs. This graphic uses exclusive data from our partner Benchmark Mineral Intelligence to show the evolution of lithium-ion battery prices over the last 10 years.

How much does a lithium ion battery cost?

Currently, 54% of the cell price comes from the cathode, 18% from the anode, and 28% from other components. The average price of lithium-ion battery cells dropped from \$290 per kilowatt-hour in 2014 to \$103 in 2023. In the coming months, prices are expected to drop further due to oversupply from China.

How much does a battery cost in 2022?

In 2022, the estimated average battery price stood at about USD 150 per kWh, with the cost of pack manufacturing accounting for about 20% of total battery cost, compared to more than 30% a decade earlier. Pack production costs have continued to decrease over time, down 5% in 2022 compared to the previous year.

What percentage of EV batteries are in demand in 2022?

In 2022, about 60% of lithium, 30% of cobalt and 10% of nickel demand was for EV batteries. Just five years earlier, in 2017, these shares were around 15%, 10% and 2%, respectively.

What happened to battery metal prices in 2022?

Turmoil in battery metal markets led the cost of Li-ion battery packs to increase for the first time in 2022, with prices rising to 7% higher than in 2021. However, the price of all key battery metals dropped during 2023, with cobalt, graphite and manganese prices falling to lower than their 2015-2020 average by the end of 2023.

How has battery quality changed over the past 30 years?

As volumes increased, battery costs plummeted and energy density -- a key metric of a battery's quality -- rose steadily. Over the past 30 years, battery costs have fallen by a dramatic 99 percent; meanwhile, the density of top-tier cells has risen fivefold.

A halving in only four years. We see this decline in the chart, which shows the average price trend of lithium-ion cells from 1991 through to 2018. 4 This is shown on a ...

Here is an overview of historical car battery prices. This graph is updated daily and shows the most up-to-date prices.

Lithium-ion battery pack price dropped to 115 U.S. dollars per kilowatt-hour in 2024, down from over 144 dollars per kilowatt-hour a year earlier.

Battery prices refer to the average battery price in a given region, including locally produced batteries and imports. Related charts Battery electric car sales breakdown (2022-2023) and ...

The price of battery packs for electric vehicles has dropped this year by the most since 2017 as oversupply from China and cheaper lithium prices have driven the decline

Interactive chart showing the daily 10 year treasury yield back to 1962. The 10 year treasury is the benchmark used to decide mortgage rates across the U.S. and is the most liquid and widely ...
