We are able to conduct battery tests for the United Nations requirements (UN 38.3) as well as several safety standards such as IEC 62133,IEC 62619 and UL 1642 and performance standards like IEC 61960-3.

Are lithium-ion batteries safe?

The large electric motors in electric vehicles are powered through rechargeable battery systems and lithium-ion batteries have become the dominant choice. Ensuring the safety of lithium-ion batteries requires thorough and accurate testing.

Are lithium-ion batteries a good choice for electric vehicles?

As the global demand for innovation in electric vehicles (EV) continues to grow the need for qualified testing of lithium-ion batteries to power electric vehicles also continues to grow. The large electric motors in electric vehicles are powered through rechargeable battery systems and lithium-ion batteries have become the dominant choice.

How should a battery safety test be reported?

The SAE recommends that results of each test should be reported in terms of the Hazard Severity levelsdescribed in Table 8 ,and the use of such information in Battery safety and Hazard risk migration approaches. Rechargeable Energy Storage System (RESS) responses in abusive tests should be determined.

What are lithium-ion batteries?

Lithium-ion batteries (LIBs) have raised increasing interest due to their high potential for providing efficient energy storage and environmental sustainability. LIBs are currently used not only in portable electronics, such as computers and cell phones, but also for electric or hybrid vehicles.

SGS is a recognized partner to the automotive and battery industry and offers a range of testing services for the inspection of cells, modules and entire battery systems, from 48 V-mild hybrid batteries to those weighing more than 1,000 kg that power full electric cars.

How It's Done: To conduct a capacity test, the battery is fully charged, then discharged under controlled conditions until it reaches a specific cut-off voltage (usually between 2.5V and 3.0V for lithium batteries). The amount of energy the battery provides during this discharge is recorded, which is compared to the manufacturer's rating.
