

The reason why polymer battery packs swell

What factors affect the swelling behavior of a battery?

Finally, the factors affecting the swelling behavior are discussed and analyzed based on the validated swelling mechanical model. d , t and K are all designable parameters in the battery engineering application. They all have obvious effects on the preload step, swelling force, and stress distributions of the battery.

Are swollen batteries a common issue for Motorola devices?

Swollen batteries are not a common issue for Motorola devices; however, all lithium polymer batteries, which are found in mobile phones, tablets and PCs, may experience battery swelling on occasion due to various factors such as exposure to external heat, over discharging or end-of-life.

Why does a battery swell with a larger preload?

This happens because the contact area changes less with larger preload when the battery swells. On the other hand, D s e, swelling increases with s e, pre in each t or d ?. The degrees of influence are related to t or d ?, when t or d ? increases, D s e, swelling changes larger within the ranges of s e, pre.

Why are lithium-ion polymer batteries so popular?

Lithium-ion polymer batteries have increased in popularity in recent years and have become standard in the electronics industry due to customer preferences for a slim form factor (especially with newer ultra-thin laptops) and long battery life. Inherent to lithium-ion polymer battery technology is the potential for swelling of the battery cells

What causes volume expansion in lithium polymer batteries?

The inappropriate charge-discharge of lithium polymer batteries or the high number of cycles (degradation) can lead to volume expansion. The principal motivation

Can a model predict the swelling behavior of lithium-ion batteries?

The model can predict the swelling behavior in both free and constrained conditions. The factors affecting the swelling behavior are discussed and analyzed. The swelling of lithium-ion batteries (LIBs) is one of the responsible reasons to cause capacity degradation and safety problems.
