

What are the application scopes of sodium iron phosphate energy storage

Can sodium iron phosphate be used as a cathode material for SIBs?

Herein, we report a new type of sodium iron phosphate ($\text{Na}_{0.71}\text{Fe}_{1.07}\text{PO}_4$), which exhibits an extremely small volume change ($\sim 1\%$) during desodiation. When applied as a cathode material for SIBs, this new phosphate delivers a capacity of $78 \text{ mA}\cdot\text{h}\cdot\text{g}^{-1}$ even at a high rate of 50 C and maintains its capacity over 5,000 cycles at 20 C .

Is iron-based phosphate cathode suitable for Na-ion batteries?

Iron-based phosphate cathode of $\text{Na}_4\text{Fe}_3(\text{PO}_4)_2(\text{P}_2\text{O}_7)$ has been regarded as a low-cost and structurally stable cathode material for Na-ion batteries (NIBs). However, their practical application is greatly hindered by the insufficient electrochemical performance and limited energy density.

How to prepare a triphylite-phase NaFePO_4 cathode material for SIBs?

Tang et al. successfully prepared a highly pure triphylite-phase NaFePO_4 cathode material for SIBs via an aqueous ion-exchange process. The preparation method for the cathode materials is economical, rapid, environmentally friendly, and simple.

What is the discharge capacity of $\text{NaFePO}_4/\text{C}/\text{graphene}$ cathode?

Furthermore, the $\text{NaFePO}_4/\text{C}/\text{graphene}$ cathode material exhibited a high discharge capacity of 145 mAh g^{-1} and maintained a discharge capacity of 142 mAh g^{-1} at 0.1C even after 300 cycles with capacity retention of 98% .

Is NaFePO_4 a cathode?

In this review, the crystal structure classification and synthesis methods of sodium iron phosphate (NaFePO_4) are comprehensively examined. The issues associated with NaFePO_4 cathode materials for emerging SIBs are also summarized.
