What is solar power & how does it work?

Solar power,also known as solar electricity,is the conversion of energy from sunlight into electricity,either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current.

How does a photovoltaic system work?

A photovoltaic system consists of one or more solar panels,an inverter that converts DC electricity to alternating current (AC) electricity,and sometimes other components such as controllers,meters,and trackers. Most panels are in solar farms or rooftop solar panels which supply the electricity grid.

How do solar panels generate electricity?

The process of generating electricity from solar panels begins with the photovoltaic cells. When sunlight strikes these cells,it knocks electrons loose from their atoms within the semiconductor material. This interaction creates a flow of electrons,resulting in an electric current. This current is direct current (DC) electricity.

How do solar panels convert sunlight to electricity?

The energy conversion process in solar panels is a seamless transition from sunlight to usable electricity. It begins with the absorption of sunlight by photovoltaic cells,where the photovoltaic effect takes place. As photons hit the cells,they dislodge electrons,creating a flow of direct current (DC) electricity.

How are solar panels arranged?

Solar panels are usually arranged in groups called arrays or systems. A photovoltaic system consists of one or more solar panels,an inverter that converts DC electricity to alternating current (AC) electricity,and sometimes other components such as controllers,meters,and trackers.

Why are solar panels called solar panels?

This process is known as the photovoltaic (PV) effect,which is why solar panels are also called photovoltaic panels,PV panels or PV modules. Solar panels respond to both direct sunlight coming straight from the sun and diffuse sunlight reflected from particles in clouds and the atmosphere.
