Why is the government removing market barriers to energy storage?

In its response to EAC's report, published today, the Government has set out the steps it is taking to remove market barriers so as to support the rollout of energy storage projects at scale, in order to keep the lights on when renewable energy generation is low.

How will energy storage affect global electricity production?

Global electricity output is set to grow by 50 percent by mid-century, relative to 2022 levels. With renewable sources expected to account for the largest share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between supply and demand.

What are the different types of energy storage technologies?

Pumped hydro,batteries,hydrogen,and thermal storageare a few of the technologies currently in the spotlight. The global battery industry has been gaining momentum over the last few years,and investments in battery storage and power grids surpassed 450 billion U.S. dollars in 2024. Find the latest statistics and facts on energy storage.

How does energy storage work?

Energy storage creates a buffer in the power systemthat can absorb any excess energy in periods when renewables produce more than is required. This stored energy is then sent back to the grid when supply is limited.

How many states have energy storage policies?

Around 15 stateshave adopted some form of energy storage policy, including procurement targets, regulatory adaption, demonstration programs, financial incentives, and/or consumer protections. Several states have also required that utility resource plans include energy storage.

How can energy storage support the transition to clean electricity?

With renewable sources expected to account for the largest share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between supply and demand. To support the global transition to clean electricity, funding for development of energy storage projects is required.
